Parwinder singh
1) Create a wordpress project using MAMP.

2) Open the testsite to verify it is loading with default settings.
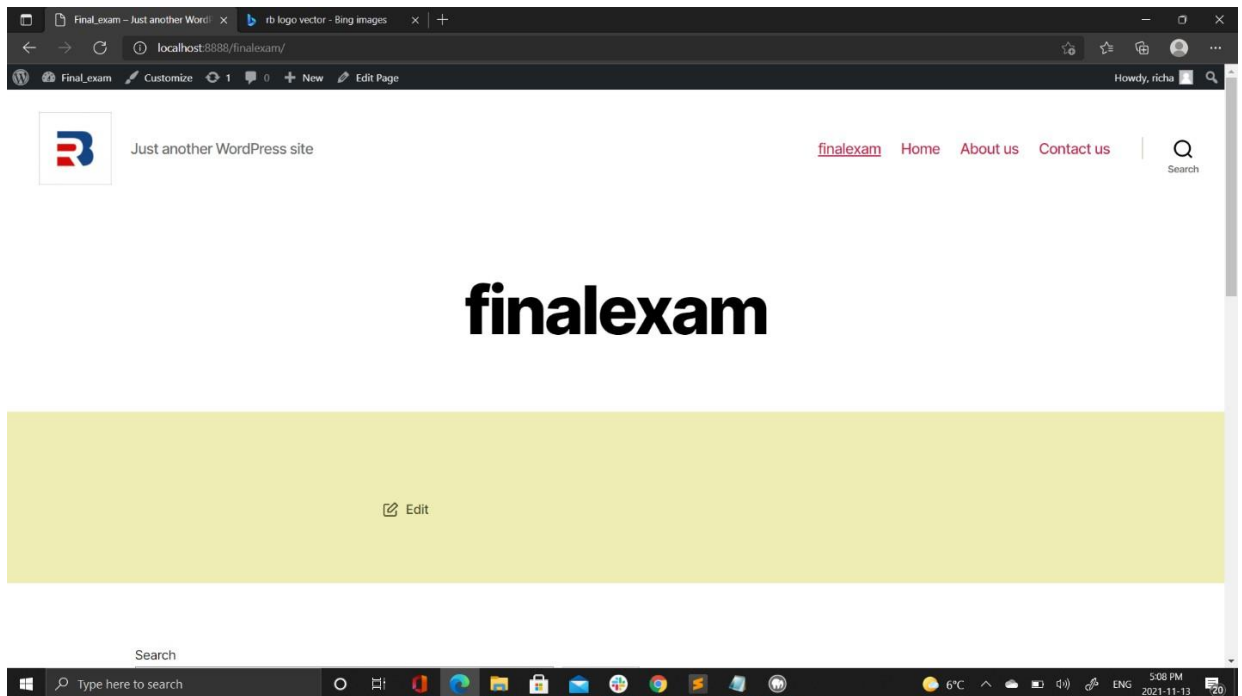

3) Create a custom theme and activate it.

4) Create 10 posts using Fakerpress.

5) Create three pages namely Home, About US and Contact US.

6) All the pages should have a header, footer respectively.
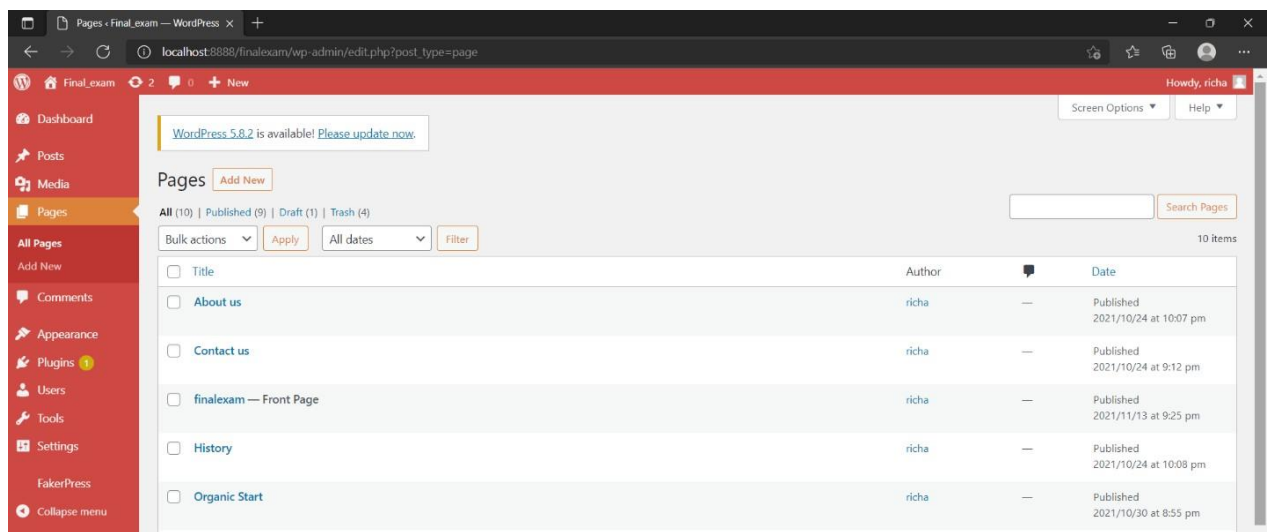

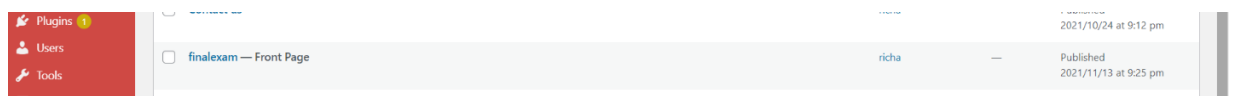

7) Give a logo to your page and integrate it.

8) Create atleast two categories for your page's posts.

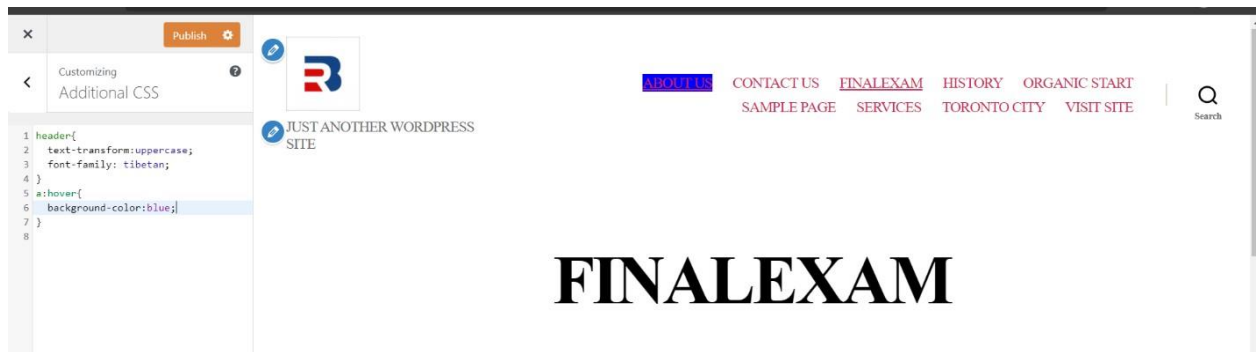

9) Have the 5 major template files integrated to your project.

10) Change the homepage setting.

11) Edit the theme file by adding a custom css. Change atleast three different css properties.

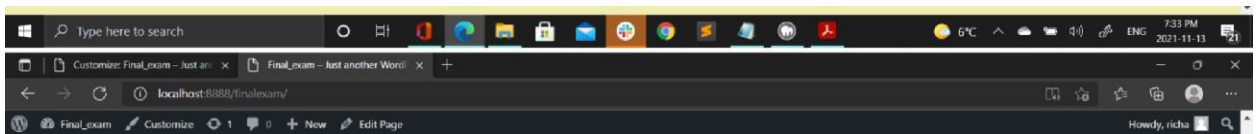

12) Add a thumbnail by using hooks.

13) Enable pagination for your posts. (Have 20 posts to test this)
